### Chapter 1

# Triangle

Consider a triangle with vertices

$$\mathbf{A} = \begin{pmatrix} -3 \\ -5 \end{pmatrix}, \mathbf{B} = \begin{pmatrix} 3 \\ -5 \end{pmatrix}, \mathbf{c} = \begin{pmatrix} -4 \\ -3 \end{pmatrix}, \tag{1.1}$$

## 1.1. Vectors

## 1.2. median

1.2.1. If **D** divides BC in the ratio k:1,

$$\mathbf{D} = \frac{k\mathbf{C} + \mathbf{B}}{k+1} \tag{1.2.1.1}$$

Find the mid points  $\mathbf{D}$ ,  $\mathbf{E}$ ,  $\mathbf{F}$  of the sides BC, CA and AB respectively. If  $\mathbf{D}$  divides BC in the ratio k:1,

$$\mathbf{D} = \frac{k\mathbf{C} + \mathbf{B}}{k+1} \tag{1.2.1.2}$$

Find the mid points  $\mathbf{D}, \mathbf{E}, \mathbf{F}$  of the sides BC, CA and AB respectively. Given:

$$\mathbf{A} = \begin{pmatrix} 1 \\ 3 \end{pmatrix} \tag{1.2.1.3}$$

$$\mathbf{B} = \begin{pmatrix} -3\\0\\ \end{pmatrix} \tag{1.2.1.4}$$

$$\mathbf{C} = \begin{pmatrix} 0 \\ 4 \end{pmatrix} \tag{1.2.1.5}$$

**Solution:** Since **D** is the midpoint of BC,

$$k = 1$$
 (1.2.1.6)

$$\implies \mathbf{D} = \frac{\mathbf{C} + \mathbf{B}}{2} \tag{1.2.1.7}$$

$$= \frac{1}{2} \begin{pmatrix} -3\\4 \end{pmatrix} \tag{1.2.1.8}$$

Similarly,

$$\mathbf{E} = \frac{\mathbf{A} + \mathbf{C}}{2} \tag{1.2.1.9}$$

$$\mathbf{E} = \frac{\mathbf{A} + \mathbf{C}}{2}$$

$$= \frac{1}{2} \begin{pmatrix} 1 \\ 7 \end{pmatrix}$$

$$\mathbf{F} = \frac{\mathbf{A} + \mathbf{B}}{2}$$

$$(1.2.1.10)$$

$$(1.2.1.11)$$

$$\mathbf{F} = \frac{\mathbf{A} + \mathbf{B}}{2} \tag{1.2.1.11}$$

$$= \begin{pmatrix} -3\\3 \end{pmatrix} \tag{1.2.1.12}$$

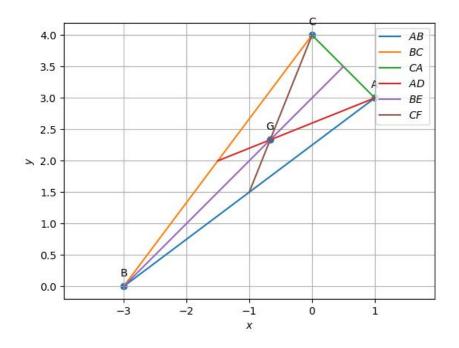

Figure 1.1: Triangle ABC with midpoints D,E and F

### 1.2.2. Find the equations of AD, BE and CF.

**Solution:** :  $\mathbf{D}$ , $\mathbf{E}$ , $\mathbf{F}$  are the midpoints of BC,CA,AB respectively, then

$$\mathbf{D} = \begin{pmatrix} \frac{-3}{2} \\ 2 \end{pmatrix} \tag{1.2.2.1}$$

$$\mathbf{E} = \begin{pmatrix} \frac{1}{2} \\ \frac{7}{2} \end{pmatrix} \tag{1.2.2.2}$$

$$\mathbf{F} = \begin{pmatrix} \frac{-3}{2} \\ \frac{3}{2} \end{pmatrix} \tag{1.2.2.3}$$

(1.2.2.4)

(a) The normal equation for the median AD is

$$\mathbf{n}^{\mathsf{T}} \left( \mathbf{x} - \mathbf{A} \right) = 0 \tag{1.2.2.5}$$

$$\implies \mathbf{n}^{\top} \mathbf{x} = \mathbf{n}^{\top} \mathbf{A} \tag{1.2.2.6}$$

We have to find the  $\mathbf{n}$  so that we can find  $\mathbf{n}^{\top}.$  Since,

$$\mathbf{n} = \begin{pmatrix} 0 & 1 \\ -1 & 0 \end{pmatrix} \mathbf{m} \tag{1.2.2.7}$$

Here  $\mathbf{m} = \mathbf{D} - \mathbf{A}$  for median AD

$$\mathbf{m} = \begin{pmatrix} \frac{-3}{2} \\ 2 \end{pmatrix} - \begin{pmatrix} 1 \\ 3 \end{pmatrix} \tag{1.2.2.8}$$

$$= \begin{pmatrix} \frac{-5}{2} \\ -1 \end{pmatrix} \tag{1.2.2.9}$$

Since,

$$\mathbf{n} = \begin{pmatrix} 0 & 1 \\ -1 & 0 \end{pmatrix} \mathbf{m} \tag{1.2.2.10}$$

$$\implies \mathbf{n} = \begin{pmatrix} 0 & 1 \\ -1 & 0 \end{pmatrix} \begin{pmatrix} \frac{-5}{2} \\ -1 \end{pmatrix} \tag{1.2.2.11}$$

$$= \begin{pmatrix} -1\\ \frac{5}{2} \end{pmatrix} \tag{1.2.2.12}$$

Hence the normal equation of median AD is

$$\begin{pmatrix} -1 & \frac{5}{2} \end{pmatrix} \mathbf{x} = \begin{pmatrix} -1 & \frac{5}{2} \end{pmatrix} \begin{pmatrix} 1 \\ 3 \end{pmatrix} \tag{1.2.2.13}$$

$$\implies \left(-1 \quad \frac{5}{2}\right)\mathbf{x} = \frac{13}{2} \tag{1.2.2.14}$$

(b) The normal equation for the median BE is

$$\mathbf{n}^{\top} \left( \mathbf{x} - \mathbf{B} \right) = 0 \tag{1.2.2.15}$$

$$\implies \mathbf{n}^{\top} \mathbf{x} = \mathbf{n}^{\top} \mathbf{B} \tag{1.2.2.16}$$

Here  $\mathbf{m} = \mathbf{E} - \mathbf{B}$  for median BE

$$\mathbf{m} = \begin{pmatrix} \frac{1}{2} \\ \frac{7}{2} \end{pmatrix} - \begin{pmatrix} -3 \\ 0 \end{pmatrix} \tag{1.2.2.17}$$

$$= \begin{pmatrix} \frac{7}{2} \\ \frac{7}{2} \end{pmatrix} \tag{1.2.2.18}$$

Since,

$$\mathbf{n} = \begin{pmatrix} 0 & 1 \\ -1 & 0 \end{pmatrix} \mathbf{m} \tag{1.2.2.19}$$

$$\Rightarrow \mathbf{n} = \begin{pmatrix} 0 & 1 \\ -1 & 0 \end{pmatrix} \begin{pmatrix} \frac{7}{2} \\ \frac{7}{2} \end{pmatrix}$$

$$= \begin{pmatrix} \frac{7}{2} \\ \frac{-7}{2} \end{pmatrix}$$

$$(1.2.2.21)$$

$$= \begin{pmatrix} \frac{7}{2} \\ \frac{-7}{2} \end{pmatrix} \tag{1.2.2.21}$$

Hence the normal equation of median BE is

$$\begin{pmatrix} \frac{7}{2} & \frac{-7}{2} \end{pmatrix} \mathbf{x} = \begin{pmatrix} \frac{7}{2} & \frac{-7}{2} \end{pmatrix} \begin{pmatrix} -3 \\ 0 \end{pmatrix}$$

$$\implies \begin{pmatrix} \frac{7}{2} & \frac{-7}{2} \end{pmatrix} \mathbf{x} = \frac{-21}{2}$$

$$(1.2.2.23)$$

$$\implies \left(\frac{7}{2} \quad \frac{-7}{2}\right)\mathbf{x} = \frac{-21}{2} \tag{1.2.2.3}$$

(c) The normal equation for the median CF is

$$\mathbf{n}^{\top} \left( \mathbf{x} - \mathbf{C} \right) = 0 \tag{1.2.2.24}$$

$$\implies \mathbf{n}^{\mathsf{T}}\mathbf{x} = \mathbf{n}^{\mathsf{T}}\mathbf{C} \tag{1.2.2.25}$$

Here  $\mathbf{m} = \mathbf{F} - \mathbf{C}$  for median CF

$$\mathbf{m} = \begin{pmatrix} \frac{-3}{2} \\ \frac{3}{2} \end{pmatrix} - \begin{pmatrix} 0 \\ 4 \end{pmatrix} \tag{1.2.2.26}$$

$$= \begin{pmatrix} -1\\ \frac{-5}{2} \end{pmatrix} \tag{1.2.2.27}$$

Figure 1.2: Medians AD, BE and CF

Since,

$$\mathbf{n} = \begin{pmatrix} 0 & 1 \\ -1 & 0 \end{pmatrix} \mathbf{m} \tag{1.2.2.28}$$

$$\mathbf{n} = \begin{pmatrix} 0 & 1 \\ -1 & 0 \end{pmatrix} \mathbf{m}$$

$$\implies \mathbf{n} = \begin{pmatrix} 0 & 1 \\ -1 & 0 \end{pmatrix} \begin{pmatrix} -1 \\ \frac{-5}{2} \end{pmatrix}$$

$$(1.2.2.28)$$

$$= \begin{pmatrix} \frac{-5}{2} \\ 1 \end{pmatrix}$$
 (1.2.2.30)

Hence the normal equation of median CF is

$$\begin{pmatrix} \frac{-5}{2} & 1 \end{pmatrix} \mathbf{x} = \begin{pmatrix} \frac{-5}{2} & 1 \end{pmatrix} \begin{pmatrix} 0 \\ 4 \end{pmatrix}$$
 (1.2.2.31)

$$\implies \left(\frac{-5}{2} \quad 1\right)\mathbf{x} = -4 \tag{1.2.2.32}$$

Solution: A, B and C are vertices of triangle:

$$\mathbf{A} = \begin{pmatrix} 1 \\ 3 \end{pmatrix} \tag{1.2.3.1}$$

$$\mathbf{B} = \begin{pmatrix} -3\\0 \end{pmatrix} \tag{1.2.3.2}$$

$$\mathbf{C} = \begin{pmatrix} 0 \\ 4 \end{pmatrix} \tag{1.2.3.3}$$

Since **E** and **F** are midpoints of CA and AB,

$$\mathbf{E} = \frac{\mathbf{A} + \mathbf{C}}{2} \tag{1.2.3.4}$$

$$= \begin{pmatrix} \frac{1}{2} \\ \frac{7}{2} \end{pmatrix} \tag{1.2.3.5}$$

$$\mathbf{F} = \frac{\mathbf{B} + \mathbf{A}}{2} \tag{1.2.3.6}$$

$$= \begin{pmatrix} \frac{-3}{2} \\ \frac{3}{2} \end{pmatrix} \tag{1.2.3.7}$$

The line BE in vector form is given by

$$\left(\frac{7}{2} \quad \frac{-7}{2}\right)\mathbf{x} = \left(\frac{-21}{2}\right) \tag{1.2.3.8}$$

The line CF in vector form is given by

$$\left(\frac{-5}{2} \quad -1\right)\mathbf{x} = \left(-4\right) \tag{1.2.3.9}$$

From (1.2.3.8) and (1.2.3.9) the augmented matrix is:

$$\begin{pmatrix} \frac{7}{2} & \frac{-7}{2} & \frac{-21}{2} \\ \frac{-5}{2} & -1 & -4 \end{pmatrix} \tag{1.2.3.10}$$

Solve for x using Gauss-Elimination method:

$$\begin{pmatrix} \frac{7}{2} & \frac{-7}{2} & \frac{-21}{2} \\ \frac{-5}{2} & -1 & -4 \end{pmatrix} \xleftarrow{R_2 \leftarrow R_2 + 2R_1} \begin{pmatrix} \frac{7}{2} & \frac{-7}{2} & \frac{-21}{2} \\ \frac{9}{2} & -8 & -25 \end{pmatrix}$$

$$(1.2.3.11)$$

$$\stackrel{R_2 \leftarrow R_2/9}{\longleftrightarrow} \begin{pmatrix} \frac{7}{2} & \frac{-7}{2} & \frac{-21}{2} \\ \frac{1}{2} & \frac{-8}{9} & \frac{-25}{9} \end{pmatrix}$$

$$\stackrel{R_2 \leftarrow R_2/9}{\longleftrightarrow} \begin{pmatrix} \frac{7}{2} & \frac{-7}{2} & \frac{-21}{2} \\ \frac{1}{2} & \frac{-8}{9} & \frac{-25}{9} \end{pmatrix} (1.2.3.12)$$

$$\begin{array}{c}
R_1 \leftarrow R_1 - \frac{13}{2}R_2 \\
\leftarrow & \frac{1}{4} \quad \frac{-27}{4} \quad \frac{-55}{4} \\
\frac{1}{2} \quad \frac{-8}{9} \quad \frac{-25}{9}
\end{array}$$
(1.2.3.13)

Therefore,

$$\mathbf{G} = \begin{pmatrix} \frac{-55}{4} \\ \frac{-25}{9} \end{pmatrix} \tag{1.2.3.14}$$

From Fig. 1.3, We can see that  $\mathbf{G} = \begin{pmatrix} \frac{-55}{4} \\ \frac{-25}{9} \end{pmatrix}$  is the intersection of BEand CF

Figure 1.3: G is the centroid of triangle ABC

### 1.2.4. Verify that

$$\frac{BG}{GE} = \frac{CG}{GF} = \frac{AG}{GD} = 2 \tag{1.2.4.1}$$

Question 1.2.4: Verify that

$$\frac{BG}{GE} = \frac{CG}{GF} = \frac{AG}{GD} = 2 \tag{1.2.4.2}$$

**Solution:** In order to verify the above equation we first need to find  $\mathbf{G}.\mathbf{G}$  is the intersection of BE and CF, Using the value of  $\mathbf{G}$  from (1.2.3).

$$\mathbf{G} = \begin{pmatrix} \frac{-55}{4} \\ \frac{-25}{9} \end{pmatrix} \tag{1.2.4.3}$$

Also, We know that  $\mathbf{D}$ ,  $\mathbf{E}$  and  $\mathbf{F}$  are midpoints of BC, CA and AB respectively from (1.2.1).

$$\mathbf{D} = \begin{pmatrix} \frac{-3}{2} \\ 2 \end{pmatrix}, \, \mathbf{E} = \begin{pmatrix} \frac{1}{2} \\ \frac{7}{2} \end{pmatrix}, \, \mathbf{F} = \begin{pmatrix} \frac{-3}{2} \\ \frac{3}{2} \end{pmatrix}$$
 (1.2.4.4)

(a) Calculating the ratio of BG and GE,

$$\mathbf{G} - \mathbf{B} = \begin{pmatrix} \frac{-67}{4} \\ \frac{-25}{9} \end{pmatrix} \tag{1.2.4.5}$$

$$\mathbf{E} - \mathbf{G} = \begin{pmatrix} \frac{57}{4} \\ \frac{113}{18} \end{pmatrix} \tag{1.2.4.6}$$

$$\|\mathbf{G} - \mathbf{B}\| = \sqrt{\left(\frac{-67}{4}\right)^2 + \left(\frac{25}{9}\right)^2} = \frac{\sqrt{288}}{3}$$
 (1.2.4.7)

$$\|\mathbf{E} - \mathbf{G}\| = \sqrt{\left(\frac{57}{4}\right)^2 + \left(\frac{113}{18}\right)^2} = \frac{\sqrt{288}}{6}$$
 (1.2.4.8)

$$\frac{BG}{GE} = \frac{\|\mathbf{G} - \mathbf{B}\|}{\|\mathbf{E} - \mathbf{G}\|} = \frac{\frac{\sqrt{288}}{3}}{\frac{\sqrt{288}}{3}} = 2 \quad (1.2.4.9)$$

(b) Calculating the ratio of CG and GF,

$$\mathbf{G} - \mathbf{C} = \begin{pmatrix} \frac{-55}{4} \\ \frac{-61}{9} \end{pmatrix} \tag{1.2.4.10}$$

$$\mathbf{F} - \mathbf{G} = \begin{pmatrix} \frac{51}{4} \\ \frac{77}{18} \end{pmatrix} \tag{1.2.4.11}$$

$$\|\mathbf{G} - \mathbf{C}\| = \sqrt{\left(\frac{-55}{4}\right)^2 + \left(\frac{-61}{9}\right)^2} = \frac{\sqrt{800}}{3}$$
 (1.2.4.12)

$$\|\mathbf{F} - \mathbf{G}\| = \sqrt{\left(\frac{51}{4}\right)^2 + \left(\frac{77}{18}\right)^2} = \frac{\sqrt{200}}{3}$$
 (1.2.4.13)

$$\frac{CG}{GF} = \frac{\|\mathbf{G} - \mathbf{C}\|}{\|\mathbf{F} - \mathbf{G}\|} = \frac{\frac{\sqrt{80}}{3}}{\frac{\sqrt{20}}{3}} = 2 \quad (1.2.4.14)$$

(c) Calculating the ratio of AG and GD,

$$\mathbf{G} - \mathbf{A} = \begin{pmatrix} \frac{-59}{4} \\ \frac{-52}{9} \end{pmatrix} \tag{1.2.4.15}$$

$$\mathbf{D} - \mathbf{G} = \begin{pmatrix} \frac{49}{4} \\ \frac{43}{9} \end{pmatrix} \tag{1.2.4.16}$$

$$\|\mathbf{G} - \mathbf{A}\| = \sqrt{\left(\frac{-59}{4}\right)^2 + \left(\frac{-52}{9}\right)^2} = \frac{\sqrt{1280}}{4}$$
 (1.2.4.17)

$$\|\mathbf{D} - \mathbf{G}\| = \sqrt{\left(\frac{49}{4}\right)^2 + \left(\frac{43}{9}\right)^2} = \frac{\sqrt{1280}}{8}$$
 (1.2.4.18)

$$\frac{AG}{GD} = \frac{\|\mathbf{G} - \mathbf{A}\|}{\|\mathbf{D} - \mathbf{G}\|} = \frac{\frac{\sqrt{1290}}{4}}{\frac{\sqrt{1290}}{8}} = 2 \quad (1.2.4.19)$$

From (1.2.4.9), (1.2.4.14), (1.2.4.19)

$$\frac{BG}{GE} = \frac{CG}{GF} = \frac{AG}{GD} = 2 \tag{1.2.4.20}$$

Hence verified.

1.2.5. Show that **A**, **G** and **D** are collinear.

**Solution:** Given that,

$$\mathbf{A} = \begin{pmatrix} 1 \\ 3 \end{pmatrix} \quad \mathbf{B} = \begin{pmatrix} -3 \\ 0 \end{pmatrix} \quad \mathbf{C} = \begin{pmatrix} 0 \\ 4 \end{pmatrix} \tag{1.2.5.1}$$

We need to show that points A, D, G are collinear. From Problem

1.2.3 We know that, The point **G** is

$$\mathbf{G} = \begin{pmatrix} \frac{-55}{4} \\ \frac{-25}{9} \end{pmatrix} \tag{1.2.5.2}$$

And from Problem 1.2.1 We know that, The point  $\mathbf D$  is

$$\mathbf{D} = \begin{pmatrix} \frac{-3}{2} \\ 2 \end{pmatrix} \tag{1.2.5.3}$$

In Problem 1.1.3, There is a theorem/law mentioned i.e.,

Points A, D, G are defined to be collinear if

$$\operatorname{rank} \begin{pmatrix} 1 & 1 & 1 \\ \mathbf{A} & \mathbf{D} & \mathbf{G} \end{pmatrix} = 2 \tag{1.2.5.4}$$

Using the above law/Theorem Let

$$\mathbf{R} = \begin{pmatrix} 1 & 1 & 1 \\ 1 & \frac{-3}{2} & \frac{-55}{4} \\ 3 & 2 & \frac{-25}{9} \end{pmatrix}$$
 (1.2.5.5)

The matrix  $\mathbf{R}$  can be row reduced as follows,

$$\begin{pmatrix}
1 & 1 & 1 \\
1 & \frac{-3}{2} & \frac{-55}{4} \\
3 & 2 & \frac{-25}{9}
\end{pmatrix}
\xrightarrow{R_2 \leftarrow R_2 + 3R_1}
\begin{pmatrix}
1 & 1 & 1 \\
4 & \frac{3}{2} & 13 \\
3 & 2 & \frac{-25}{9}
\end{pmatrix}$$
(1.2.5.6)

$$\stackrel{R_2 \leftarrow \frac{2}{5}R_2}{\longleftrightarrow} \begin{pmatrix} 1 & 1 & 1 \\ \frac{8}{5} & \frac{3}{5} & \frac{26}{5} \\ 3 & 2 & \frac{-25}{9} \end{pmatrix}$$
(1.2.5.7)

$$\begin{array}{c}
(R_{2} \leftarrow \frac{2}{5}R_{2}) \\
(R_{2} \leftarrow \frac{2}{5}R_{2}) \\
(R_{3} \leftarrow \frac{2}{5}R_{2}) \\
(R_{3} \leftarrow R_{3} - R_{2}) \\
(R_{3} \leftarrow R_{3$$

Rank of above matrix is 2.

Hence, we proved that that points A, D, G are collinear.

#### 1.2.6. Verify that

$$\mathbf{G} = \frac{\mathbf{A} + \mathbf{B} + \mathbf{C}}{3} \tag{1.2.6.1}$$

**G** is known as the centroid of  $\triangle ABC$ .

Verify that

$$\mathbf{G} = \frac{\mathbf{A} + \mathbf{B} + \mathbf{C}}{3} \tag{1.2.6.2}$$

**G** is known as the <u>centroid</u> of  $\triangle$ ABC SOLUTION:

let us first evaluate the R.H.S of the equation

$$\mathbf{G} = \frac{\begin{pmatrix} 1\\3 \end{pmatrix} + \begin{pmatrix} -3\\0 \end{pmatrix} + \begin{pmatrix} 0\\4 \end{pmatrix}}{3}$$

$$= \begin{pmatrix} \frac{1-3+0}{3}\\\frac{3+0+4}{3} \end{pmatrix}$$

$$= \begin{pmatrix} \frac{-2}{3}\\\frac{7}{3} \end{pmatrix}$$

$$(1.2.6.3)$$

Hence verified.

#### 1.2.7. Verify that

$$\mathbf{A} - \mathbf{F} = \mathbf{E} - \mathbf{D} \tag{1.2.7.1}$$

The quadrilateral AFDE is defined to be a parallelogram.

Question : Verify that

$$\mathbf{A} - \mathbf{F} = \mathbf{E} - \mathbf{D} \tag{1.2.7.2}$$

The quadrilateral AFDE is defined to be parallelogram

**Solution:** Given that,

$$\mathbf{A} = \begin{pmatrix} 1 \\ 3 \end{pmatrix} \quad \mathbf{B} = \begin{pmatrix} -3 \\ 0 \end{pmatrix} \quad \mathbf{C} = \begin{pmatrix} 0 \\ 4 \end{pmatrix} \tag{1.2.7.3}$$

From Problem 1.2.1 We know that, The point  $\mathbf{D}, \mathbf{E}, \mathbf{F}$  is

$$\mathbf{D} = \begin{pmatrix} \frac{-3}{2} \\ 2 \end{pmatrix} \quad \mathbf{E} = \begin{pmatrix} \frac{1}{2} \\ \frac{7}{2} \end{pmatrix} \quad \mathbf{F} = \begin{pmatrix} -1 \\ \frac{3}{2} \end{pmatrix}$$
 (1.2.7.4)

Evaluating the R.H.S of the equation

$$\mathbf{A} - \mathbf{F} = \begin{pmatrix} 1 \\ 3 \end{pmatrix} - \begin{pmatrix} -1 \\ \frac{3}{2} \end{pmatrix} \tag{1.2.7.5}$$

$$= \begin{pmatrix} 2\\ \frac{3}{2} \end{pmatrix} \tag{1.2.7.6}$$

Evaluating the L.H.S of the equation

$$\mathbf{E} - \mathbf{D} = \begin{pmatrix} 1 \\ 3 \end{pmatrix} - \begin{pmatrix} -1 \\ \frac{3}{2} \end{pmatrix} \tag{1.2.7.7}$$

$$= \begin{pmatrix} 2\\ \frac{3}{2} \end{pmatrix} \tag{1.2.7.8}$$

Hence verified that, R.H.S = L.H.S i.e.,

$$\mathbf{A} - \mathbf{F} = \mathbf{E} - \mathbf{D} \tag{1.2.7.9}$$

From the fig1.4, It is verified that AFDE is a parallelogram

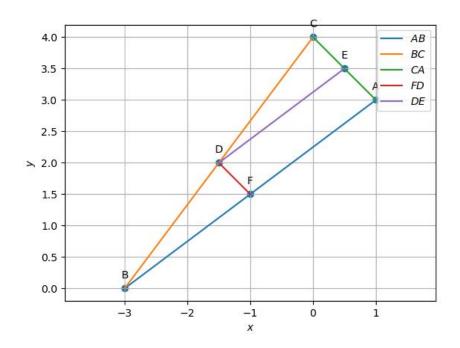

Figure 1.4: AFDE form a parallelogram in triangle ABC
